dutch science agenda

Dutch National Research Agenda | Contact

Government, universities, the Dutch National Research Agenda together with companies, civil society organisations and research centres. The agenda concerns the research questions the research will focus on for the coming years. What are the favourable opportunities for Dutch research and how can science contribute to finding solutions for societal challenges and creating the kind of knowledge the world needs?

The sorrow of science is that it's only admired for
what it can't be.

Because it constantly has to keep up the
appearance of realism it starts to believe in it at
that.

Weintraub, D. A., 2006

IS PLUTO A PLANET?

NO
Pluto is not a planet, because it is too small. At one time, astronomers thought Pluto was bigger than Mercury. Now we know Pluto is only half the diameter of Mercury. That's too small for Pluto to be a planet.

YES
Pluto has a very elliptical, or oval-shaped, orbit around the Sun. In other words, its orbit is not a circle. At times Pluto is closer to the Sun than Neptune is. So Pluto is not a planet.

FACTS
From pages 52–53 of Ten Worlds
Diameter of Mercury: 3,032 miles.
Diameter of Pluto: 1,430 miles.
Diameter of Ceres: 590 miles.

NO
Pluto has a very elliptical, or oval-shaped, orbit around the Sun. Mercury's orbital eccentricity—a measure of how elliptical an orbit is—is nearly as great as Pluto's. Yet Mercury is a planet. So is Pluto.

YES
Mercury also has a very elliptical (oval-shaped) orbit around the Sun. Mercury's orbital eccentricity—a measure of how elliptical an orbit is—is nearly as great as Pluto's. Yet Mercury is a planet. So is Pluto.

FACTS
From page 52 of Ten Worlds
Mercury's orbital eccentricity: 0.21.
Pluto's orbital eccentricity: 0.25.

NO
Newly discovered Eris is larger than Pluto, which proves Pluto is not a planet.

YES
Eris is indeed larger than Pluto, so we should call Eris a planet, too. It's the first new planet found.

FACTS
From pages 52–53 of Ten Worlds
Diameter of Pluto: 1,430 miles.
Diameter of Eris: 1,500 miles.

Meer kinderen groeien arm op

The infographic includes a map of the Netherlands with data for provinces like Utrecht (12.7%), Noord-Holland (12.4%), and Friesland (11.7%). It also features a pie chart showing the causes of child poverty: parents' income (45%), social benefits (35%), and other (20%). A large red circle highlights the figure of 295,300 children growing up in poverty.

DEFINITIE

Wat is armoede?

Aan de hand van de Veiligheidsraad hebben we voor het eerst levensochtenden.

Maar over een precies definitie is er continu discussie. Welke levensomstandigheden zijn belangrijk? Hoeveel moet er geld zijn en welke huishoudens zijn dat? Het CBS en SCP brengt regelmatig nieuwe cijfers uit die de discussie kunnen invullen. Hier volgt een voorbeeld hoe een definitie kan ontstaan.

Het CBS heeft de kans op armoede aan de hand van de zogenaamde **lage-inkomensgrens**. In de praktijk wordt de armoedekans bepaald door de afstand tot het bijstandsniveau van 1997, dat is van het jaar dat het aantal mensen in armoede voor het eerst is gestegen.

Het SCP beschrijft armoede op grond van het **niet-voldoende maatschappelijk bestaan**. Armoede is niet alleen als hij of zij ergens niet meer geld heeft voor minimaal noodzakelijke hulpbronnen is gebaseerd op verschillende criteria: gezondheid, kleding, wonen en participatie.

Het CBS verwart volgend jaar nog een **stijging van de armoede**, het SCP een daaling.

maatschappijwetenschappen

Tests of homosexuality

The Kinsey Institute website features a graph of the Kinsey Scale. The vertical axis is labeled "Intersexual" at the top and "Homosexual" at the bottom. The horizontal axis is labeled "Heterosexual-Homosexual Rating Scale" with numerical ticks from 0 to 6. A diagonal line starts at (0,0) and ends at (6,6). The area below this line is shaded green and labeled "Homosexual". The area above the line is shaded yellow and labeled "Intersexual". Below the graph, three categories are listed: 0: Exclusively heterosexual with no homosexual, 1: Predominantly heterosexual, only incidentally homosexual, and 2: Predominantly heterosexual, but more than incidentally homosexual.

groningen / faculteit gedrag- en
maatschappijwetenschappen

Brain research of homosexuality

The figure displays four brain scans arranged in a 2x2 grid. The top row shows the left amygdala (L amygdala) and the bottom row shows the right amygdala (R amygdala). The columns represent different groups: Heterosexual Man (top-left), Homosexual Woman (top-right), Heterosexual Woman (bottom-left), and Homosexual Man (bottom-right). Red dots indicate areas of significant activity or difference between these groups.

[INTERVIEW](#)

Trillion-dollar brain drain

Enormous costs of mental health problems in Europe not matched by research investment.

Not only tumors, traumatic brain injury, etc, counted as brain disorders but also headache, sleeplessness, anxiety, bad moods, bad personalities, etc.

1. PLOS ONE, an online journal of medical science in 2010, which found that brain disorders were under-represented in research papers. Bulgaria and Romania have joined the European Brain Council, which says that brain disorders have been added to the assessment, diagnosis and treatment of mental health problems, and childhood and teenage mental health problems are now being assessed on the basis of their own estimate, although double the number of people are affected.

PUBLIC BUDGETS

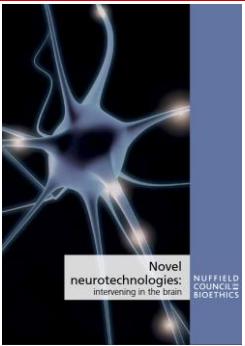

Country	Budget Allocation (%)

The World Mental Health Survey Initiative

The WMH Survey Initiative is a project of the Assessment, Classification, and Epidemiology (ACE) Group at the World Health Organization coordinating the implementation and analysis of general population epidemiologic surveys of mental, substance use, and behavioral disorders in countries in all WHO regions.

Chaired by prof dr Ronald Kessler, Harvard

Professor Kessler has been a consultant for GlaxoSmithKline Inc., Pfizer Inc., Wyeth-Ayerst, Sanofi-Aventis, Kaiser Permanente, and Shire Pharmaceuticals; has served on advisory boards for Eli Lilly & Company and Wyeth-Ayerst; and has had research support for his epidemiological studies from Eli Lilly and Company, Pfizer Inc., Ortho-McNeil Pharmaceutical Inc., and

Hamilton Depression Rating Scale (HDRS)

PLEASE COMPLETE THE SCALE BASED ON A STRUCTURED INTERVIEW

Instructions: for each item select the one "cue" which best characterizes the patient. Be sure to record the answers in the appropriate spaces (positions 0 through 4).

1 DEPRESSED MOOD (sodden, hopeless, helpless, worthless)	2 FEELINGS OF GUILT
0 <input type="checkbox"/> Absent.	0 <input type="checkbox"/> Absent.
1 <input type="checkbox"/> These feeling states indicated only on questioning.	1 <input type="checkbox"/> Self reproach, feels he/she has let people down.
2 <input type="checkbox"/> These feeling states spontaneously reported verbally.	2 <input type="checkbox"/> Feelings of guilt or remorse over past errors or sinful deeds.
3 <input type="checkbox"/> Communicates feeling states non-verbally, i.e. through facial expression, posture, voice and tendency to weep.	3 <input type="checkbox"/> Present illness is a punishment. Delusions of guilt.
4 <input type="checkbox"/> Patient reports virtually only these feeling states in his/her spontaneous verbal and non-verbal communication.	4 <input type="checkbox"/> Hears accusatory or denunciatory voices and/or experiences threatening visual hallucinations.

Bijdragen aan gezondheid

The brain activity between healthy people and those with burn-out differ. This is what researchers from the Nijmegen university have found. For the first time it has been proven that burn-out truly exists.

Nikos K. Logothetis¹

What we can do and what we cannot do with fMRI

Nikos K. Logothetis¹

Functional magnetic resonance imaging (fMRI) is currently the mainstay of neuroimaging in cognitive neuroscience. Advances in scanner technology, image acquisition protocols, experimental design, and analysis methods promise to push forward fMRI from mere cartography to the true study of brain organization. However, fundamental questions concerning the interpretation of fMRI data abound, as the conclusions drawn often ignore the actual limitations of the methodology. Here I give an overview of the current state of fMRI, and draw on neuroimaging and physiological data to present the current understanding of the haemodynamic signals and the constraints they impose on neuroimaging data interpretation.

However, fundamental questions concerning the interpretation of fMRI data abound as the conclusions drawn often ignore the actual limitations of the methodology

¹Smart approach, it is the change in the blood oxygen level-dependent (BOLD) signal that is measured. This signal has no components to speak of. Even if true, the challenge remains in coming up with the correct recursive decompositions—

Neurologist prof dr Rien Vermeulen, former head neurology Amsterdam University Hospital: migraine is not visible on a scan. Does that mean it isn't real?

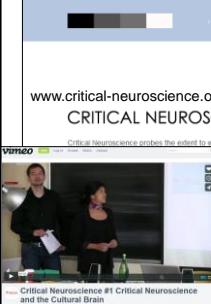

Vermeulen:
Even a tumor is not visible on a scan.
We only see a black spot and need other kinds of experts and knowledge to interpret it.

The critical neuroscience network

www.critical-neuroscience.org
Critical Neuroscience

Critical Neuroscience invites the effort to enrich discussion of neuroscience—in ethics as well as in itself: it examines the ways in which the discipline is changing our society. It also aims to bring together scholars from different disciplines who share a common interest in the social and cultural contexts of neuroscience.

50 Science Policy Briefing • June 2013

Science in Society: caring for our futures in turbulent times

Contents

- 2+ Forward
- 3+ Executive Summary
- 4+ Introduction - Defining the Issues
- 6+ Science-society relations: a concern shared by many
- 8+ Broaderening the meaning of science-society relations
- 9+ The context of this report
- 0+ Important lessons learned
- 11+ Shifting policy discourse on science-society issues
- 12+ Governance policy recommendations
- 13+ Science-Society Relations under Changing Boundary Conditions: tendencies and tensions
- 14+ Shifting policy discourse on science-society relations
- 15+ Changing conditions for research and innovation
- 21+ Shifting science-society activities
- 24+ Recommendations
- 31+ Annexes

'the public understanding of the social dimensions of science'

Our recommendations touch upon five broad areas:

1. Linking excellence to relevance and responsibility
2. 'Science-society activities' – integration and separation from research
3. Plurality matters
4. Expanding and creating new spaces for science-society interactions
5. Making time-space for reflexive work

The task is to make **visible** the invisible, to expose to public scrutiny the assumptions, values and visions that drive science

 See-through Science
Why public engagement needs to move upstream

 Institute Demos & RSA
Scientists need to find ways of listening to and valuing more diverse forms of public knowledge and social intelligence. Only by opening up

Open up... we believe that science contributes to the common good. Despite this, we are worried that the public also wants answers to state in any new technology. Who decides what is good? In what purpose will it be developed?

"green alliance..." RSA
